Administrative Tasks

Customization

1. Subdomain

Just go to your GitLab app in the [NWS Customer Interface](#) and click on "Settings". Open the "CNAME"- tab and fill in your subdomain.

Stevos GitLab 7080-gitlab-4f9a3 BASIC

Domain Settings

Configure your own Domain Name

You can configure your own domain ending with nws.netways.de or save your own custom domain SSL/TLS protected

CNAME ^

The custom domain name is limited up to 50 chars and allows only letters, numbers and dashes.

Subdomain

.nws.netways.de

Customer Domain v

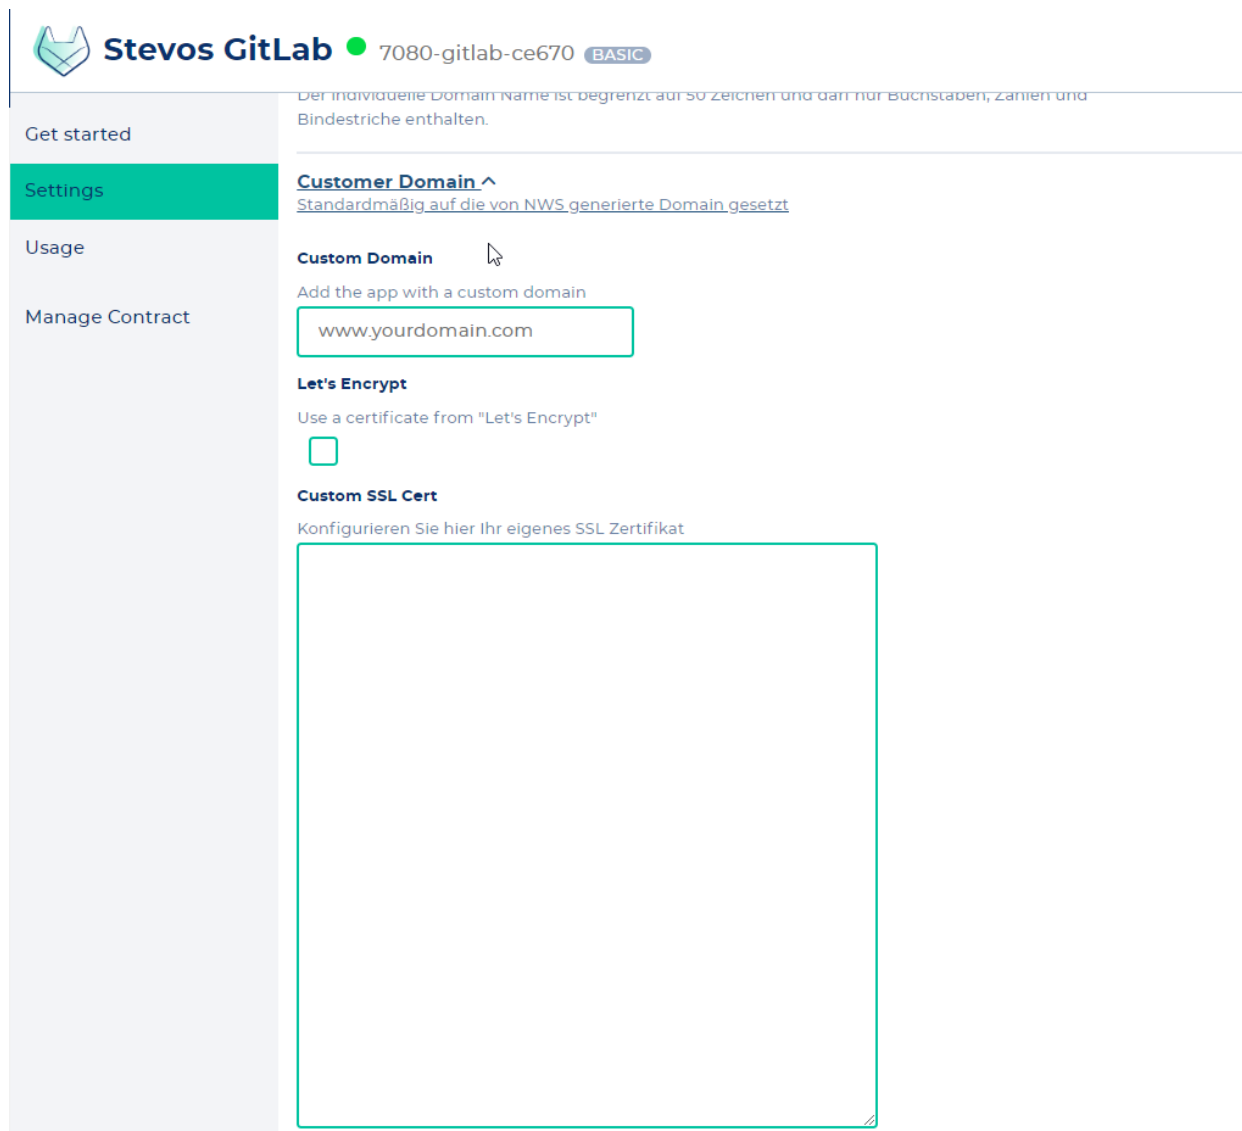

Defaults to the provided NWS domain

Save Domain Settings

2. Customer Domain

To setup your Customer Domain, the following things must be fulfilled /accomplished:

1. Domain must belong to you
2. You must set an A-record to IP 185.11.255.46 for the domain name
3. You enter this in our [NWS Customer interface](#) at your GitLab app under "Settings"

Stevos GitLab ● 7080-gitlab-ce670 **BASIC**

Der individuelle Domain Name ist begrenzt auf 50 Zeichen und darf nur Buchstaben, Zahlen und Bindestriche enthalten.

Update Contract

OAuth for user integration

GitLab provides OAuth for an easy user integration. Just go to your GitLab app in the [NWS Customer Interface](#) and click on "Settings". You can drop your OAuth credentials to use the pre-configured providers (GitHub, Twitter, Google, Facebook, GitLab.com, BitBucket, AzureAD, ADFS) at "External authentication with OAuth".

Update GitLab Runner

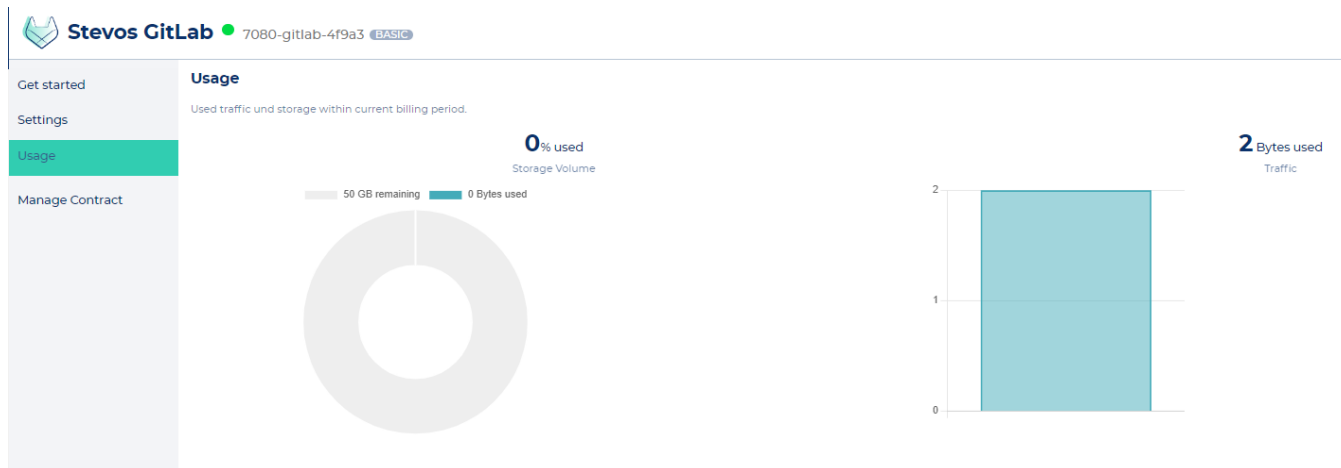

A new up-to-date Runner will be created and registered after 5-10 minutes.
Please note that an individual configuration of the runners (such as tags) must be applied manually.

Update Runner

Remaining storage volume

Just go to your GitLab app in the [NWS Customer Interface](#) and click on "Usage".

Upgrade to a bigger plan

Just go to your GitLab app in the [NWS Customer Interface](#) and click on "Manage contract". Here you can upgrade to *Advanced* or *Premium* plan. If the *Premium* plan is no longer sufficient, contact us via sales@netways.de and we will provide you with a customized solution on OpenStack.

Update Contract

SSH access

Access via SSH is not possible with the GitLab SaaS app.

You can only access your GitLab via https.

But you can use [Git's credential.helper](#) for effortless access. Just set this up once and you won't have to enter your credentials (username + PW) every time. You can do your Git pulls and Git pushes comfortably that way.

If access via SSH is essential for you, we can set up a custom GitLab instance on our OpenStack.

Here, the resources (CPU, RAM, storage) can be freely determined and adapted at any time.

Features that are not possible in our standardized SaaS app can also be implemented here (e.g. access via SSH, GitLab pages, self-selected update period, freely selectable backup cycle).

There is no contract period and billing is based on the [resources](#) used and the support time provided (which is accounted for separately in contrast to our SaaS offer). Just write us [here](#), if this sounds interesting for you.
